Step 1 - Analyse Eta et N_w

Dossier: C:\Users\falve\OneDrive\Documents\GitHub\LiouvilleSolver\SOC Model\Result_Test\step1_minimal_bright_dark\Eta_scan

Fichiers S_data analyses: 40

Composante: S_component_rephasing

Fenetre d'integration: +/- 0.025 eV

Eta: [0.0001, 0.0005, 0.001, 0.005, 0.01, 0.05]

V0: [0.0, 0.01, 0.05]

N_w: [50, 80, 100, 150, 200, 300]

Lecture principale:

- Les scans Eta de reference sont lus sur N_w=80 pour ne pas les melanger avec les scans de grille.
- Les scans N_w testent surtout la stabilite numerique des integrales de fenetre.
- Une soustraction de fond utilise V0=0 au meme Eta/N_w si possible; sinon le N_w disponible le plus proche.
- Points cross-window avec baseline N_w approximative: 1.
